

Business Plan: MirrorVue — The TV That Disappears

Generated by /bbb (Benji Builds Businesses) from a viral reel (Business_Growth_Feed, 1.9K reactions). Source business: a premium "mirror TV" that looks like a designer mirror when off and reveals a screen when on.

1. The Insight (why this reel went viral)

People don't want a black rectangle dominating their living room — but they still want a big screen. The mirror TV **removes the ugly TV** from the room 95% of the time it's off, and turns it into a designer mirror. The business didn't invent a better TV; it **improved the experience around an existing TV**. That reframing is the whole opportunity, and it's a category US luxury buyers already pay \$3,000–\$7,000+ for.

2. The Product

A premium television concealed behind a **dielectric mirror** (the optical-grade glass that actually lets a TV show through — not cheap two-way glass, which is the #1 beginner mistake). When off: a flawless framed or frameless mirror. When on: a crisp 4K screen.

The smart build (asset-light "assembler" model):

- **Samsung The Frame TV** (thin, light, bright — the industry-preferred panel) — 43"–75"
- **Custom dielectric mirror glass** cut to size (sourced from US glass suppliers or Alibaba at volume)
- **Frame** (frameless, wood, or metal to match decor)
- Optional: motion sensor, smart-home integration, anti-fog (for bathroom/vanity units)

You are **not manufacturing** — you're assembling proven components into a high-ticket design product and owning the brand + customer experience.

3. The US Market

- **Leader / proof of demand:** Séura (Wisconsin) — the category standard for "vanishing" TV mirrors, sells residential + commercial + vanity units, typically **\$3k–\$7k+** per unit.
- **Other players:** Electric Mirror, Reflectel, HiddenTelevision, PictureFrame.TV, Frame My TV.
- **Buyers:** luxury homeowners, interior designers/architects (B2B repeat channel), boutique hotels, spas, med-spas, gyms, high-end real estate staging.
- **Why now in America:** Samsung Frame normalized "TV as art"; mirror TV is the premium next step, and most incumbents are expensive and design-stale. Room for a modern, content-led, designer-friendly brand.

4. Unit Economics (illustrative, 55" frameless)

Item	Cost
Samsung Frame 55"	~\$1,000
Dielectric mirror glass (cut to size)	~\$400–700

Item	Cost
Frame + mounting hardware	~\$150–300
Packaging / freight (in)	~\$150
COGS	~\$1,700–2,150
Retail price	\$3,500–4,500
Gross margin	50–60% (\$1,800–2,500/unit)

Vanity/bathroom units (smaller TV) carry even higher margins. B2B/designer deals move 3–10 units per project.

4b. China Sourcing (the margin unlock)

Two ways to source from China — each changes the economics:

Path A — Import the finished mirror TV (highest margin, more risk). Chinese factories (Alibaba / Made-in-China) sell complete smart mirror TVs 32"–75", CE-certified, often with 5-yr warranty:

- Small LED smart mirrors: **~\$42–69/unit** (MOQ ~10)
- Larger finished mirror TVs (55–75", hotel/luxury grade): typically **~\$200–600 FOB** depending on size/spec
- **Landed cost** after freight + ~US duties/tariffs (TVs + possible Section 301 China tariff): roughly **\$400–900** for a large unit
- Sell at **\$2,500–4,000** → **~75–85% gross margin**
- *Trade-offs:* not a Samsung panel (brand trust), QC variance, MOQ ~10 units up front, freight breakage on glass, tariff exposure. Order **samples first**, vet QC, insure freight.

Path B — Import only the dielectric/two-way glass, pair with a US Samsung Frame (best trust + margin balance).

- Two-way / magic-mirror glass from China: **~\$1.2–80 per m²** (a 55" screen ≈ 0.8 m² → **single-digit to ~\$60 of glass**), MOQ ~100 m², bulk >1,000 m² = 15–30% off
- Pair with a domestically-bought **Samsung The Frame** (\$1,000) → keep the "Samsung inside" trust story, COGS still ~~~\$1,100–1,300~~**, sell **\$3,500–4,500** → **~65–70% margin**

Recommendation: Start with **Path B** (sample Chinese glass + Samsung Frame) to protect brand trust and avoid big MOQ/tariff risk; graduate to **Path A** for volume/hospitality once QC and freight are proven. Watch current **US tariffs on Chinese electronics/glass** — price them into landed cost before committing.

5. Revenue Snapshot

- Sell **4 units/month** at ~~\$2,000 gross each~~ → ****\$8K/mo gross profit**** with almost no inventory (build-to-order).
- Land **2 interior-designer accounts** doing one project/quarter → recurring multi-unit orders.
- Year-1 realistic target: **\$250k–\$500k revenue** at 50%+ gross margin, run lean (you + an installer subcontractor).

6. Go-To-Market

1. **Content engine (your edge):** short-form "the TV that disappears" reels — the format already proved itself. This is exactly the kind of clip /bbb produces.

2. **Interior designers & architects:** the real growth channel — give them a trade program + spec sheets. One designer = repeat multi-unit orders.
3. **Local luxury:** partner with high-end AV installers, kitchen/bath showrooms, real-estate stagers.
4. **Build-to-order site:** configurator (size → frame → finish) with deposit checkout; no inventory risk.

7. 30 / 60 / 90-Day Launch

- **Days 1–30:** Lock a dielectric-glass supplier + order one 55" sample build. Brand + one-page configurator site. Shoot 5 "disappearing TV" reels with the sample in a nice space.
- **Days 31–60:** Open a trade/designer program. DM/visit 25 local interior designers + 10 AV installers with the demo unit. Run the reels as paid traffic to the configurator.
- **Days 61–90:** Fulfill first build-to-order units via a subcontracted installer. Capture install footage → more content. Target first 3–5 paying installs.

8. Risks & How to Beat Them

- **Cheap two-way glass looks dim** → spec **dielectric** only; make it part of the brand story.
- **Freight/breakage on glass** → crate properly, build-to-order, local installs first.
- **Incumbents are established** → win on design, content, and designer relationships, not price.
- **Returns on high-ticket** → sell via demo + deposit, not blind e-commerce.

9. Why This Fits the "Benji Builds Businesses" Audience

Asset-light, high-ticket, content-driven, and US-launchable this quarter with a few thousand dollars and one sample unit. The viral format that sells it is the same format your members can produce.

Suppliers to start with: HiddenTelevision.com (dielectric glass + framed kits), TwoWayMirrors.com, Reflectel, PictureFrame.TV. Panel: Samsung The Frame. Sample dielectric mirror ~\$9.95 to verify clarity before committing.
