

GripGuard Floor Safety

One liquid. Slippery floors made safe in minutes. Charge by the square meter.

What It Is

GripGuard is a local floor-safety service built on an anti-slip treatment liquid (developed in China) that, when applied to tile and stone, micro-etches the surface to dramatically increase grip — almost instantly, with no visible change. You apply it for businesses with slippery floors and charge per square meter. It solves a real, expensive problem: slip-and-fall accidents that every tiled venue quietly worries about.

How It Makes Money

You sell a per-square-meter application service (\$3-\$8/sqm) to restaurants, hotels, gyms, pools, shopping centers, hospitals, and any business with smooth wet floors. The liquid is cheap; the value is liability reduction and safety compliance, so you charge for outcome, not materials. Recurring revenue comes from reapplication contracts and adding new commercial accounts. High margin, real demand, simple pitch.

Startup Costs

- Anti-slip treatment liquid (starter drums): \$300-\$900
- Application kit (applicators, neutralizer, pH strips, PPE): \$150-\$400
- Slip-resistance test meter (tribometer) for before/after proof: \$300-\$1,200
- Wet vac / squeegees / buckets: \$150-\$400
- GoHighLevel site + CRM: \$97/month
- Vehicle signage, business cards, sample kit: \$200-\$600
- Insurance (general liability): \$500-\$1,200/year
- **Realistic start: \$1,500-\$4,500**

Sourcing: Buy the treatment in bulk from Alibaba — search "anti slip floor treatment solution," "non slip tile coating," and "floor anti-slip liquid." Concentrate runs cheap per liter and covers large areas, so material cost per job is minimal.

The Numbers

- Material + consumables cost per 100 sqm job: ~\$25-\$60
- Sell price: \$3-\$8/sqm → \$300-\$800 per 100 sqm
- Profit per job: ~\$250-\$700 (a few hours of labor)
- Slow month (part-time): 8 jobs → ~\$2,500 profit
- Built-up month (commercial accounts + crew): 25-40 jobs → ~\$8,000-\$15,000 profit
- Reapplication contracts (every 1-3 years) create a renewing book of business.

How To Start

1. Order the treatment and a slip-test meter; practice on tile samples and document before/after grip readings.
2. Define pricing per square meter with minimum job size and volume tiers.
3. Build a GoHighLevel site with the safety/liability pitch and a free-test offer.

4. Get general liability insurance — essential for selling a safety service to businesses.
5. Offer free demo treatments on a small high-risk area (entryways, bathrooms) to land first accounts.
6. Target restaurants, hotels, gyms, and pools with cold outreach and the liability angle.
7. Sign reapplication/maintenance contracts and expand to a small crew.

Where To Get Customers

- Direct B2B outreach to restaurants, hotels, gyms, pools, and property managers
- Google Business Profile + "anti-slip floor treatment near me" search
- Facility management and commercial cleaning company partnerships
- Insurance brokers and safety consultants (referral source — they want lower claims)
- LinkedIn outreach to facilities and operations managers

Pro Tips

- Lead with a tribometer reading before and after — measurable proof of reduced slip risk closes hesitant managers fast.
- Frame the price against the cost of one slip-and-fall lawsuit; that's the real comparison and it makes your fee trivial.
- Land facility-management and cleaning-company partnerships; one contract can feed you dozens of locations.
