

LineBot — Robotic Line-Striping Service

One robot, twenty jobs a month, \$10k.

What It Is

LineBot is a line-striping service powered by an autonomous (or semi-autonomous) line-painting robot. You program a layout once and the robot lays down clean, precise lines for parking lots, warehouse floors, sports courts, factory safety markings, and roadways. It does in minutes what a crew does in hours, with sharper, more consistent results — and the lines wear out, so the same clients keep calling you back.

How It Makes Money

You charge per job or per linear foot. Buyers are property managers, retail centers, churches, schools, warehouses, gyms, and HOAs — anyone with a lot or floor that needs fresh markings. The killer feature is recurring demand: paint fades, lots get resealed, layouts change, so each client becomes a repeat customer on a 1–3 year cycle, plus add-ons like stencils, handicap symbols, and numbering.

Startup Costs

- Autonomous line-marking robot (Alibaba — "robot line marking machine" / "autonomous line painting robot"): **\$8,000–\$25,000** depending on accuracy and capacity; a manual walk-behind striper as a backup runs **\$300–\$2,000**.
- Cargo trailer or van to transport the rig: **\$5,000–\$15,000** (or use an existing truck).
- Paint inventory (traffic/athletic paint), stencils, marking chalk: **\$1,000–\$2,500**.
- LLC, contractor/business license, commercial insurance: **\$2,000–\$5,000**.
- Website, branding, before/after demo video: **\$800–\$2,000**.
- **Lean start (manual + entry robot): ~\$12,000–\$25,000.**

The Numbers

Materials per small job (a modest parking lot re-stripe) $\approx$ **\$40–\$90** in paint plus a few hours of largely hands-off labor. Charge **\$400–\$700** per small job $\rightarrow$ **$\sim$ \$350–\$650 profit per job**. Hitting the video's math: **20 jobs/month at $\sim$ \$500 = \$10,000 revenue**, minus ~~\$1,500 materials/fuel~~ = **$\sim$ \$8,500 profit/month** — roughly five jobs a week. Larger lots and warehouse floors bill **\$1,500–\$6,000** each, so even 6–8 mid-size jobs a month clears five figures. Repeat contracts smooth the pipeline.

How To Start

1. Get licensed and insured as a contractor; line-striping often needs general liability coverage to bid commercial work.
2. Buy or finance a line-marking robot (start with a quality walk-behind striper if cash is tight) and stock traffic paint + stencils.
3. Practice on your own driveway/lot until layouts, spacing, and handicap stencils are crisp.
4. Shoot a sharp before/after demo reel — faded lot to factory-fresh lines.
5. Build a simple quote-request site and Google Business Profile targeting "parking lot striping [city]."
6. Cold-call and email property managers, churches, schools, and warehouses; offer a free measured quote.
7. Land 3–5 anchor clients, then pitch them annual re-stripe contracts for recurring revenue.

Where To Get Customers

Google Business Profile + local SEO (high-intent searches), direct outreach to property management companies, HOAs, churches, gyms, schools, and warehouses, partnerships with sealcoating/asphalt contractors (they sealcoat, you stripe), and Facebook local business groups. The robot itself is great content for social proof.

Pro Tips

- Partner with asphalt and sealcoating crews — every lot they resurface needs re-striping immediately after; become their go-to subcontractor.
- Sell maintenance contracts, not one-offs. A managed re-stripe schedule turns one-time jobs into predictable annual recurring revenue.
- Specialize in the high-margin extras competitors skip — warehouse safety floor marking, sports courts, and stenciled fire lanes command premium rates.
