

WallLumen — Modular LED Screen Installs

Turn dead walls into money machines.

What It Is

A business that installs modular LED screens on building exteriors and inside stores, converting plain, ignored walls into high-attention digital displays. In a world drowning in boring ads, the ones that interrupt attention win — and a moving, glowing screen makes people stop, look, and remember. One install can earn three ways: sell the screens outright, rent them monthly, or sell ad space on them to local businesses.

How It Makes Money

Three stacked revenue models: (1) one-time hardware sale + install fee; (2) monthly rental/lease of the screen to a venue; (3) recurring ad-network income — you control the screen and sell rotating ad slots to nearby businesses. Buyers are retailers, restaurants, malls, gyms, car dealers, and landlords with visible wall space. The ad model turns a one-time job into compounding monthly income.

Startup Costs

- Modular LED panels (P3-P5 indoor/outdoor, starter wall): **\$1,500-\$8,000** — Alibaba search "modular outdoor LED display screen panel P4"
- Controller, media player, mounting hardware: **\$400-\$1,500**
- Install tools, lift rental, electrical supplies: **\$300-\$1,200**
- Content/CMS software (scheduling ads): **\$0-\$1,000/yr**
- Business license + electrical/permits: **\$300-\$1,500**
- Demo unit + branding + website: **\$500-\$1,500**
- Per-unit import note: LED panels land around **\$200-\$600 per square meter** from China; a 6 sqm wall is roughly **\$1,500-\$3,500** in hardware.
- **Total to launch: ~\$3,500-\$12,000**

The Numbers

- Hardware cost for a mid-size wall (6-sqm): ~~~\$2,500~~ + install labor
- Sell that install outright at **\$6,000-\$12,000** → profit **\$3,000-\$7,000 per job**
- OR rent at **\$400-\$1,200/month** per screen
- OR sell ad slots: 8 local businesses × \$150/month = **\$1,200/month recurring per screen**
- 3 ad-funded screens + 2 installs/month → **\$10,000-\$20,000/month** blended
- Recurring ad income compounds: every new screen adds another monthly stream with no new selling.

How To Start

1. Buy one starter LED panel set and build a demo wall you can show prospects.
2. Learn the install (mounting, power, controller/CMS) on the demo or a small first job.
3. Get business and electrical permits; line up a licensed electrician partner.
4. Sell your first install to a visible retailer or restaurant at a fair fixed price.

5. Pitch the ad model to landlords: free screen, you split ad revenue.
6. Sign 6-10 local advertisers per screen onto monthly rotating slots.
7. Reinvest install profits into more screens you own and monetize via ads.

Where To Get Customers

- Retailers, restaurants, gyms, salons, car dealers with visible walls
- Mall and commercial-property landlords (high-traffic placements)
- Local-business outreach for ad slots (the recurring money)
- Reels showing a boring wall transformed into a glowing display
- Sign/AV installer partnerships and referral commissions

Pro Tips

- Own the screen, sell the ads. The outright-sale model is one-and-done; the ad-network model on screens you control is where real recurring wealth compounds.
- Place screens where attention is forced — checkout lines, entrances, busy intersections. Visibility, not size, sets the ad rate.
- Bundle content creation. Charging advertisers a small fee to design their slot adds margin and locks them in.
