

Virtual Graffiti Wall

An interactive event-entertainment business: guests grab a tracked "spray can" and paint real graffiti on a giant screen or projected wall — zero mess, instant prints, instant social shares. A photo booth on steroids you rent out for weddings, corporate events, parties, and brand activations at premium hourly rates.

The Insight

It's the photo-booth rental model with 10x the wow and 2x the price. The "magic" is a screen + a light-emitting/tracked can + software; once you own the rig, every event is near-pure margin. It draws a crowd (lines form), every creation is a branded print + a social post (free marketing for you and the host), and it slots into the proven, recession-resilient events-rental industry. Rentals run **\$350–\$550/hr** and events book it for **3–4+ hours**.

The Product / Service

A large LED video wall or a bright projector + a tracked digital spray can (3D-tracked, responds to distance/angle), running graffiti software: colors, caps, stencils, stickers, animations. Guests spray live → snap a photo → decorate it → **instant print + text/email/social share** (branded). Add-ons: branded templates for corporate clients, multi-wall city-vs-city competitions, attendant staffing.

US Market & Competitors

- **Established, proven niche:** Air Graffiti / Foto Master, CEG Interactive, GraffitiPlus, Interactive Entertainment Group already rent these — described as "incredible ROI." **But it's a local/regional service** — most metros have room for another quality operator, and it pairs with any existing photo-booth/event-rental business.
- **Buyers:** weddings, bar/bat mitzvahs, grad & birthday parties, corporate events, product launches, festivals, malls, museums, brand activations.
- **Edge:** far more engaging + premium than a photo booth; branded prints = built-in advertising; rebookable via planners/venues.

China Import Sourcing (the gear)

- **The display:** an LED video-wall (P2.5–P4 indoor panels) or a high-lumen short-throw projector — both far cheaper direct from Shenzhen/Alibaba than US AV retail (a modular LED wall is the premium look; a projector + wall is the budget entry).
- **Mini PC / media server, the spray-can controllers (motion/IR-tracked), a photo printer (dye-sub), wireless mic/router** all sourceable direct. Software is the IP — license an existing graffiti-wall package or commission one; the gear is the China play.
- Add ~20–35% over FOB for freight + duty. (Budget path: projector rig from ~\$3–8k of parts; premium LED-wall rig more.)

Startup Cost & Unit Economics

- **Budget rig (projector): \$3,000–\$8,000** (projector + mini PC + tracked cans + printer + software). **Premium LED wall:** \$15,000–\$40,000.
- **Per event:** transport + an attendant + consumables (prints) ≈ \$100–\$300.

- **Price: \$350–\$550/hr**, typical booking 3–4 hrs = **\$1,200–\$2,200/event** (corporate/branded higher). **Gross margin 80%+** once the rig is owned.
- **Payback:** the budget rig pays for itself in **~3–6 events**.

Revenue Potential

Booking 2–4 events/week at ~\$1,500 (weekends are king) = **\$3,000–\$6,000/week** in season, ~\$200 cost each. Scale with multiple rigs/crews, planner + venue partnerships, corporate activations, and a recurring spot at malls/attractions. Branded corporate activations are the high-ticket tier.

Go-To-Market

1. **Content-first:** film the live spray + the finished art + the crowd reaction (this is pure viral bait and your whole ad budget).
2. **Sell to the gatekeepers:** wedding/event planners, venues, corporate event marketers, photo-booth referrals.
3. **Lead with corporate + weddings** (highest budgets); branded templates as an upsell.
4. **Every print is branded** with your logo + the host's → free distribution.

30 / 60 / 90-Day Launch

- **30:** source/assemble a rig (projector path to start cheap); master the setup; build a demo reel; price packages; list on event-rental marketplaces.
- **60:** book first weddings/parties off the content; pitch 3–5 planners + venues; nail setup/teardown + instant-print flow.
- **90:** add corporate/branded activations; a 2nd rig or attendant; lock venue/planner partnerships + a mall/attraction slot.

Risks

- **Upfront gear cost** → start with the projector rig (cheap), reinvest into an LED wall once booked.
- **Tech reliability at events** → rehearse, carry spares (can, cables, backup projector), keep it simple.
- **Seasonality** (wedding/event season) → push corporate + indoor venues + holiday parties year-round.
- **Software/IP** → license a proven graffiti package or commission one; don't reinvent the tracking from scratch.
